Module 0 About This Course

Course Objectives.....	0-3
Prerequisites	0-6
Rational University Curriculum.....	0-7

Module 1 Best Practices of Software Engineering

Practice 1: Develop Iteratively	1-6
Practice 2: Manage Requirements	1-7
Practice 3: Use Component Architectures	1-8
Practice 4: Model Visually.....	1-10
Practice 5: Continuously Verify Quality	1-12
Practice 6: Manage Change	1-14

Module 2 Concepts of Object Orientation

Four Principles of Modeling	2-4
Representing Classes in the UML.....	2-12
Class Relationships.....	2-14
What is a Structured Class?	2-21
What Is an Interface?	2-29
What is a Port?	2-33
Review	2-39

Module 3 Requirements Overview

What Is System Behavior?	3-8
Use-Case Specifications	3-14
What Is an Activity Diagram?	3-17
Glossary.....	3-21
Supplementary Specification	3-24
Review	3-32

Module 4 Analysis and Design Overview

Analysis Versus Design	4-6
Analysis and Design Workflow	4-12
Review	4-19

Module 5 Architectural Analysis

Architectural Analysis Overview	5-4
Package Relationships: Dependency	5-8
Patterns and Frameworks	5-11
What Are Stereotypes?.....	5-18
Architectural Mechanisms: Three Categories	5-22
What Are Key Abstractions?	5-30
The Value of Use-Case Realizations.....	5-35
Review	5-39

Module 6 Use-Case Analysis

Use-Case Analysis Overview	6-4
Use-Case Analysis Steps	6-8
Find Classes from Use-Case Behavior	6-12
Distribute Use-Case Behavior to Classes	6-27
Describe Responsibilities.....	6-37
Association or Aggregation?.....	6-46
What Are Roles?	6-47
Unify Analysis Classes	6-57
Review	6-62
